

BROTATO: GOURMET

Fan-made DLC — Full Design Document (working title, all numbers pre-playtest)

The Big Idea

A consumable overhaul. In the base game, the only thing enemies drop to eat is fruit (healing). Gourmet adds **food**: new consumables that grant temporary, stackable combat buffs instead of raw healing. No food drops by default — every food enters the game through a specific **spawner item** that defines when and why it appears (kills, crits, dodges, standing still, shop rerolls...). Foods count as consumables, so every existing consumable-triggered character and item interacts with them. A new primary stat, **Appetite**, scales how strong (and eventually how long) food buffs are. Build around one food engine or stack five of them — the DLC turns "what am I eating this run?" into a real build question.

Content totals so far: **82 items** (20 food spawners / 37 food-related / 25 general), **20 foods**, **20 weapons**, **1 new stat** (Appetite), **1 new weapon class** (Culinary). Characters, enemies, challenges and all sprites are still in planning.

The Appetite Stat & Scaling Rules

Appetite is a new primary stat (like Engineering or Luck). Food buffs read: *base + (ratio × Appetite)*. Doctrine: (1) anything granted by eating scales with Appetite; (2) damage effects also scale with their native damage stat (burns with Elemental, projectiles with Ranged, contact with Melee — dual scaling, like the Taser); (3) always-on item stat lines are flat; (4) anti-food effects are flat on purpose. A committed build peaks around 35-45 Appetite.

Section 1 — The 20 Food Spawner Items

Each item introduces one food and its spawn trigger. Every food counts as a consumable. App = your Appetite stat. ♦ = unique (one copy max).

Item	Tier	Spawn trigger	Food & effect
After-Dinner Mints ♦	T2/75	every 5 consumables picked up	Mint: refreshes duration of ALL active food buffs

Section 4 — Weapons: the Culinary Class (20 weapons)

New weapon class **Culinary** — set bonus grants Appetite (+2/+4/+6/+9/+12 at 2/3/4/5/6 same-class weapons). Class fills target the game's starving classes (Medical 2, Musical 2, Tool 3, Naval 4, Blunt 5, Heavy 5). Cooldowns in ticks (60 = 1 second). Tier rule: T2 ×1.6 dmg, T3 ×2.3, T4 ×3-4, cooldown −15/−30/−45%, crit roughly doubles by T4. ■ = character-win unlock with minimum tier. ■ = only appears if Abyssal Terrors is installed.

Balance Philosophy & Guardrails

- The multiplier stack (MSG × Intermittent Fasting × Michelin Star) can reach ~×3 food potency — all three are unique, and the path strips food healing, so the god-build pays in sustain.
- Leftovers (Doggy Bag) is the intended infinite: uncapped stacking damage that requires wasting food, anti-synergizing with eating builds. Two incompatible god-builds beat one mandatory one.
- Negative-Appetite items mirror the base game's –Luck/–Harvesting cost lines: free value for non-food builds, real tension for food builds.
- Tier spread ≈ 21/21/25/15 — matches base-game proportions; final numbers pass after playtesting.

Still in Planning (in order)

1. **Characters** (~5, incl. "The Gourmet": all fruit becomes food, +1 permanent Appetite per 10 foods eaten) — each pairs with one of the 5 unlock weapons.
2. Enemies / elites (food-themed; art-heaviest, optional tier).
3. Challenges & unlock conditions.
4. Final DLC name.
5. Numbers/balance pass with community DPS calculators.
6. Sprites last — current ledger ≈ 103 item/food icons + 20 weapons + ~7 projectiles/effects.

Built on the official DLC plug-in system reverse-engineered from Abyssal Terrors — new stats, items, weapons, characters and weapon classes all register through the game's own DLCData API. Fan project for personal use.
